24, Stanley Crescent,  
Notting Hill. W.

My dear Mills,  
Here are all  
I can scrape together.  
The only important  
ones wanting are  
(1) Drops and Bubbles III  
(2) Some derivatives  
from the Oxyacids.  
Trans. R. Soc. Edin.  
(3) Contributions to the  
Acid group. (Therapeutic  
action of nitrate of Amyl  
etc.) Chem. Soc. Jour.  
The whole together with  
two little books, of which  
one was still born and  
the other is still to be so

carstitutes just twenty  
years' work. Save the  
marks! What poor devils  
we mainly are.

Another twenty years  
and all the corn will  
be ground. Then the  
only remaining operation  
will be bolting.

I will send others ~~if~~  
I find any and new  
chicks as they are hatched.

I find papers dated  
from Germany, Manchester,  
Edinburgh, Mauritius and  
London. This makes me  
determined.

Hoping that you like  
your place and that you  
may soon find time to  
work for glory and  
man's eternal gain.

Faithfully yours  
Fred. L. Entwine

Referring to his works: 'The whole . . . constitutes just twenty years' work. Save the mark! What poor devils  
we mainly are. Another twenty years and all the corn will be ground.' . . .

force than those I have already considered . . . I am quite willing to abandon my idea of the post-Roman rise of  
whenever any evidence is advanced against it. . . . There is no merit in honestly confessing an error when one  
he has made it.' . . .
